

Project Initialization and Planning Phase

Date	1 July 2026
Team ID	SWTID-2026-4523
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement):

The purpose of this problem statement is to understand the challenges faced by both credit card applicants and financial institutions during the credit card approval process. By identifying customer needs, pain points, and expectations, the team can develop a machine learning-based Credit Card Approval Prediction system that helps banks make faster, more accurate, and unbiased approval decisions while improving the customer experience. This approach enables the team to better understand user requirements and design a solution that minimizes manual effort, reduces processing time, and supports reliable decision-making.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card.	Get my credit card application approved quickly.	My application is taking too long to process.	The approval process requires manual verification and depends on many eligibility factors.	Frustrated and uncertain about the outcome.
PS-2	A bank credit officer	Evaluate credit card applications accurately.	I have to review a large number of applications manually.	Manual verification is time-consuming and may lead to inconsistent decisions.	Overloaded and stressed.
