

Coding & Solution

Date	1 July 2026
Team ID	SWTID-2026-4523
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Coding & Solution

The Coding & Solution document summarizes the implementation of the Credit Card Approval Prediction System. It demonstrates how the application was developed using clean coding practices, a modular structure, and machine learning techniques. The solution fulfills the project's functional requirements by providing an automated, accurate, and user-friendly credit card approval prediction system.

Instructions

1. Ensure the project is developed using a modular and well-structured codebase with proper comments and meaningful naming conventions.
2. Implement all core functionalities, including applicant data input, data preprocessing, and machine learning-based credit card approval prediction.
3. Include all required source files, datasets, trained model files, configuration files, and dependency information.
4. Upload the complete project to GitHub and provide the repository link in the Solution Summary.

Solution Summary:

Field	Details
Repository Link / URL	https://github.com/patnamkavyasri-source/Credit-Card-Approval-Prediction
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	Flask, Scikit-learn, Pandas, NumPy
Key Features Implemented	User authentication, applicant data entry, data preprocessing, machine learning-based credit card approval prediction, result display, input validation, responsive web interface.

Pending / Incomplete Features	Email notifications, deployment on cloud platform, prediction history.
Setup / Run Instructions	Install the required Python libraries, open the project in Visual Studio Code, activate the virtual environment, run app.py, and access the application through the local Flask server in a web browser.

Code Quality Checklist:

S.NO	Criteria	Status (Yes / No)
1	Code is modular and organized into functions/classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments/documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular architecture with separate frontend, backend, and machine learning components. It provides accurate credit card approval predictions through an intuitive web interface and is designed for easy maintenance and future enhancements.
