

Project Executable Files

Date	1 July 2026
Team ID	SWTID-2026-4523
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files:

Project Executable Files include all the necessary files required to run, test, and deploy the Credit Card Approval Prediction System. These files consist of the source code, required dependencies, project structure, setup instructions, and other supporting files, enabling the evaluator to execute the application successfully.

Step 1: Submission Checklist:

S.NO	Item to Submit	Submitted
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt	Yes
4	Database schema / seed files	No / NA
5	Environment configuration (.env.example)	No
6	Deployed application URL	No
7	APK / Executable binary	NA
8	Dockerfile	NA
9	Test files and test results	Yes
10	Demo video / Walkthrough	Yes

Step 2: File / Folder Structure:

Credit_Card_Approval_Prediction/

|

|— static/

```

|   |— style.css
|
|— templates/
|   |— index.html
|   |— result.html
|
|— model/
|   |— credit_card_model.pkl
|   |— scaler.pkl
|   |— label_encoders.pkl
|
|— app.py
|— requirements.txt
|— README.md
└— sample_dataset.csv

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted
Login Credentials	Not Applicable
Platform / Hosting Provider	Local Flask Server
Repository Link	Your GitHub Repository Link
Demo Video Link	Your Demo Video Link

Step 4: Run Instructions:

1. Download or clone the project from the GitHub repository.
2. Install Python (version 3.10 or above).
3. Install all required packages using:

```
pip install -r requirements.txt
```
4. Open the project folder in Visual Studio Code.

5. Run the Flask application using:

```
python app.py
```

6. Open the browser and navigate to:

```
http://127.0.0.1:5000
```

7. Enter applicant details and click Predict to view the credit card approval result.

Step 5: Known Issues / Limitations:

S.NO	Known Issue / Limitation	Workaround / Status
1	The application runs only on a local server.	Can be deployed on cloud platforms like Render or Railway.
2	Predictions depend on the trained dataset.	Retrain the model with updated data for better accuracy.
3	Large numbers of simultaneous users may affect performance.	Use a production server (e.g., Gunicorn) for deployment.
